

Field Operations Manual

This manual describes how field engineers prepare site visits. Every visit needs a signed work order before the engineer leaves the office.

Preparation

Engineers check the equipment list, confirm the customer contact and book a vehicle through the fleet portal at least two working days in advance.

Equipment allowance

The table lists the standard kit per visit type.

Visit type	Kit	Max weight
Install	Kit A	18 kg
Repair	Kit B	12 kg
Audit	Kit C	4 kg

Heavier kits must be split across two engineers. The safety officer for heavy kits is Mira Kovac.

Reporting

After the visit, the engineer files report FR-209 within 24 hours. Reports that are late are escalated to the regional lead, who reviews them every Friday.
