

Zephyr Engineering Onboarding Checklist

1. Welcome to the Zephyr team

This checklist guides new engineers through their first week on the Zephyr platform team.

Your onboarding buddy will meet you on day one and walk you through the development environment.

Please read the engineering handbook and the incident process before your first on-call shadow shift.

Set up your laptop with the standard toolchain and request access to the staging cluster.

2. Badge and building access

Every new engineer receives a physical badge for the Lisbon office on the first day.

The Zephyr onboarding badge code is ZX-4471.

Enter the badge code at the reception kiosk to activate building access and the bike storage room.

Lost badges must be reported to the facilities team within 24 hours so the code can be revoked.

3. First week deliverables

By the end of the first week you should have merged one small change to the Zephyr service.

Schedule a thirty minute retrospective with your manager to review the onboarding experience.

Join the zephyr-dev chat channel and introduce yourself to the team.

Complete the security awareness training in the learning portal.
